Intermediate Elective Resubmission Cover Letter

1. The README was not filled in, the rendered output was not linked in the README, the tree describing the data and the code was not in my README
 2. To change this, I watched the video describing how to edit a README, and started a Page on github, made a tree, and filled in the parts that needed to be filled in.
 3. This makes my repo easier to understand when someone accesses it, and also makes my homework easier to access from the rendered html link.
-
1. I did not have the correct color scheme, dotted lines, title, or description of the process of creating my graph.
 2. To change this I met with Professor Bui in office hours to understand what my graph was missing, and the right way to correct my working moving forward. I learned that I should take the code from individual pieces instead of copying and pasting the whole thing, and learned I should focus on the meaning behind each piece. I ended up editing the titles, colors, margins, segments, labels, and captions.
 3. Now, my graph has a cohesive color scheme and the meaning behind my data comes out more clearly, depicting the peaks in both invertebrates and how it has changed throughout time. This also matches the graph I was inspired by, and has helped me understand how to make graphs look more complex and pretty.
